Date of Surgery:

OSCA – IVC Filter Placement

Pre-op	Understands indications for IVC filter; conducts history and physical and reviews pertinent labs and imaging	Knows some pertinent patient information and labs	Knows nothing about patient
Landmarks	Verbalizes access landmarks and teaches others; properly positions patient, utilizes full sterile technique	Knows relationship of the vein to the artery; patient/supplies not positioned for maximum ease of insertion	Unable to locate access landmarks and uncomfortable with relevant anatomy; breach in sterile technique
US-Guided Venipuncture	Easily identifies artery and vein, cannulates vein in one stick with probe in one hand and syringe in the other	Required multiple attempts in cannulating vein	Great difficulty in cannulating vein, or cannulated artery
Introducing Equipment Under Fluoroscopy	Advances wire under fluoroscopy; able to manipulate wire if coils in heart or enters hepatic veins; safely advances dilator/introducer under fluoroscopy	Requires some assistance	Attempts to advance equipment without watching monitor
Anatomy and Cavagram	Demonstrate familiarity with normal and variant IVC and renal vein anatomy; performs cavagram with proper positioning of sheath and identification of renal vein washout and caliber of cava	Demonstrate familiarity with normal IVC and renal vein anatomy; requires some assistance in performing cavagram and positioning of sheath	Not familiar with normal or variant IVC and renal vein anatomy; unable to proceed with cavagram; inaccurate identification of renal vein washout and caliber of cava
IVC Filter Placement	Properly positions introducer and accurately deploys filter under fluoroscopy and saves image of filter in place	Some difficulty in positioning introducer, deploys filter with assistance	Did not look at the monitor during fluoroscopy and unable to place filter
Chest X-ray	Reassessed patient's vital signs, chest x-ray ordered and promptly checked	Ordered chest x-ray but never followed up	Forgot to order chest x-ray
